

Systems' Efficiency through Objectivity: **The Yanaboo Advantage**

New Frontiers of Efficiency, Reliability and Productivity.

Yanaboo Consulting
http://www.yanaboo.com/
New York, NY — Washington, DC

April 2008

Yanaboo Consulting opens a new agenda in systems management that antiquates traditional information systems management woes. Through a combination of proven software and hardware techniques, objective and ground-breaking procedural matrices, and the Yanaboo Neptune dynamic interface framework, irregularities in:

DATA ACCESS — ACCESS CONTROL — BUSINESS INTELLIGENCE — B2B AND B2C COMMUNICATION

become problems of the past.

Traditional Environments such as:

LAMP
Jasper BI
DPS & IPS integration
Dynamic web content (xHTTP, etc.)

plus proprietary **Procedural Matrices** like the following:

Operating Level	One	Two	Three	Four	Five
Operating Rationale	Level definition				
Procedures	How normal business is conducted				
Precautions	Steps for protection				
Concerns	Additional thoughts				

incorporated with the **Yanaboo NeptuneTM** dynamic interface framework:

a fuzzy logic based intelligent adaptation engine that combines a 'plastic' version of the Temporal Dimension Model with web technologies to produce efficiency increases in real time (see 'Dellolio, Ryan: *Plasticity in Interactive User Interfaces*, 2006').

Yanaboo Consulting will be implementing the *Yanaboo Advantage* line of technologies after a full API and 0.01 release this summer.
